Profile

My name is Ardy Andhika Haydar, and I am a forward-thinking Computer Engineering graduate specializing in AI-Native Web Development. Armed with rigorous academic training from Esa Unggul University, I possess deep architectural and programmatic fundamentals that go beyond surface-level coding. My expertise spans Web Development, Machine Learning, and Augmented Reality, demonstrated through scalable, hands-on projects. Adaptable, collaborative, and highly proficient in modern tech stacks, I am looking for professional career opportunities to contribute robust engineering solutions to innovative corporate initiatives.

Educations

Apr 2021 - Feb 2026 Computer Engineering, Universitas Esa Unggul GPA: 3.22/4.00

Jan 2018 - Feb 2021 Computer and Network Engineering, SMKN 1 Kab. Tangerang

Organizations

Secretary of COSU (Computer Organization Science Unity)

- Served as the Secretary for COSU, an extracurricular academic organization dedicated to advanced coding and programming studies outside regular lecture hours.
- Managed comprehensive administrative operations, including drafting official correspondence, maintaining meticulous records, and archiving organizational documentation.
- Coordinated internal communication and scheduling between mentors and members to ensure the seamless execution of technical workshops and coding bootcamps.
- Assisted the executive committee in strategic planning and tracking project milestones for various software development initiatives.

Skills

Tech Stack: React, HTML, CSS, Javascript, Typescript, MySQL, Laravel, PHP, Tailwind, Unity, Flutter, Golang

Area Focus: AI-Native Web Dev, Prompt Engineering, Augmented Reality, AI Integration, System Design

Soft Skills: Team and Project Management, Problem Solving, Teamwork, Adaptable, Fast Learner.

Languages

Bahasa Indonesia - Native

English - Intermediate

Projects

AI-Based Face Mask Detector | *Machine Learning Developer*

- Developed and deployed an automated Face Mask Detection system utilizing TensorFlow and OpenCV to monitor and enforce mask compliance in real-time.
- Trained and optimized deep learning models (CNNs) using TensorFlow/Keras, achieving high classification accuracy in distinguishing between masked and unmasked faces.
- Leveraged OpenCV for real-time video stream processing, facial region-of-interest (ROI) extraction, and dynamic bounding-box rendering for instant visual alerts.
- Implemented data preprocessing and augmentation techniques to enhance model robustness against varying lighting conditions, camera angles, and partial facial occlusions

RestQ - Mobile Queue Management Application | *Mobile & Backend Developer*

- Designed and developed RestQ, a cross-platform mobile application built with Flutter and a high-performance Golang backend to streamline real-time queue management and reservations.
- Engineered robust and scalable RESTful APIs using Golang, ensuring low-latency data processing and high concurrency management for incoming queue requests.
- Implemented real-time state management in Flutter to provide users with live, dynamic updates on queue status and estimated wait times.
- Optimized database interactions and backend performance, delivering a seamless user experience with fast response times across mobile devices.

Augmented Reality Animal Cell Mobile Application | *Unity3D Developer*

- Designed and developed an interactive, educational mobile application utilizing Unity3D and Vuforia AR SDK to visualize complex 3D animal cell structures.
- Implemented marker-based AR tracking using Vuforia Engine to seamlessly render high-fidelity 3D models of cell organelles upon scanning designated physical markers.
- Optimized application performance and asset deployment within Unity, ensuring stable frame rates, low latency, and an intuitive UI/UX for mobile devices.
- Transformed complex biological concepts into an immersive digital learning experience by effectively integrating technical assets with educational content.

KasirKu | *Full-Stack Laravel Developer*

Modern Web-Based Point of Sale (POS) Application

- Developed a secure, multi-tenant POS application leveraging Laravel, MySQL, Tailwind CSS, and Alpine.js, featuring complete data isolation per merchant account.
- Engineered a highly reactive client-side shopping cart with Alpine.js for real-time stock validation, instant price calculations, and seamless asynchronous checkout via Fetch API.
- Designed a robust database schema with strict referential integrity, implementing a sequential cascade strategy to safely handle bulk data wiping while bypassing MySQL Foreign Key constraints (Error 1451).
- Implemented native @media print CSS optimization for standard 80mm thermal printers and deployed portfolio demo protection to secure default catalog data against malicious manipulation.

Web Iflex – AI-Native Web Dev | *Full-Stack Laravel Developer & AI Prompt Engineer*

- Designed and developed Web Iflex utilizing the Laravel framework by leveraging *Generative AI*, independently engineering complex prompts to generate clean, functional, and production-ready code.
- Acted as the lead architect in structuring prompt logic to guide AI in generating standard Laravel MVC components, database migrations, and secure routing architectures.
- Conducted advanced customization, debugging, and code optimization on the AI-generated PHP and Laravel code, ensuring robust security measures, optimal web performance, and valid database integrations.
- Significantly reduced the Software Development Life Cycle (SDLC) by establishing an efficient, AI-driven development workflow while maintaining high-quality framework standards.
